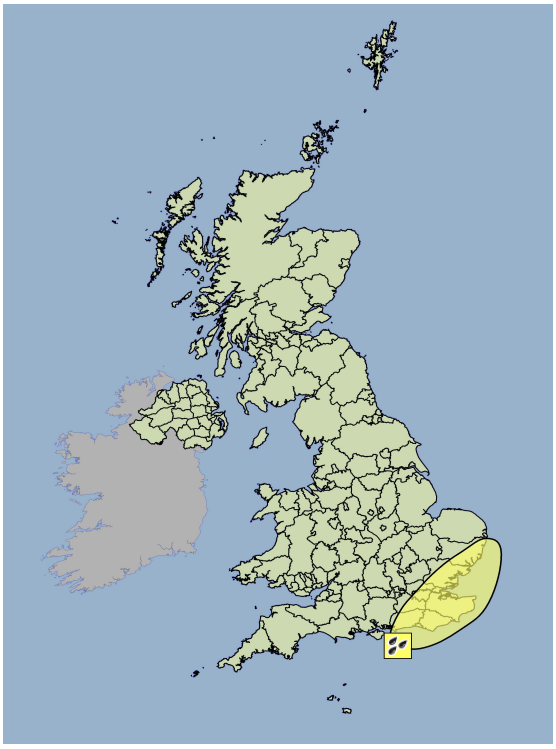
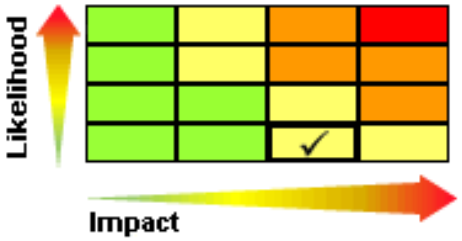
National Severe Weather Warning Service





Chief Forecasters Assessment
A complex frontal system will remain slow-moving from southwest to eastern England during Sunday. Warm, humid air on the southeast of this boundary is likely to become the focus for thundery activity imported from northern France during the late afternoon and particularly the evening, leading to localised torrential downpours.

As often in these situations, some places will miss the worst, but a few places may see 30 to 50 mm of rain in total, with hourly totals very locally above 20 mm.

The Met Office have issued a **Yellow Warning** of **Rain**

Valid from **16:00 on Sun, 30th Aug 2015** until **23:50 on Sun, 30th Aug 2015**

Although not all areas will be affected, thundery showers are likely to affect some southeastern parts of England later on Sunday. Lightning may be an additional hazard.

The public should be aware of the risk of localised impacts from heavy rain and flooding, which may affect travel and some outdoor events.

This is an update to the warning issued on Saturday, to reduce the area at risk from the thundery downpours whilst delaying the start time.
